Project 2 - Proposal

What are you planning to create? Include purpose, audience, and main functionality.

- I plan to create a Rick & Morty character website that displays character information in a visually pleasing way. The audience is for general Rick & Morty fans who are seeking to know more about different characters. The main functionality is to sort between characters based on being dead or alive, their species, and origins.

What API(s) are you planning to use? If it's not one of the pre-selected APIs, include a link to the documentation for it.

- I plan on using the Rick & Morty API linked in the Project 2 document.
